

ROCKETBOT

Leading RPA Platform

What is RPA?

RPA enables companies to create software robots that learn, imitate and then execute rules-based business processes. RPA allows users to create digital bots by observing the digital actions of human beings.

Rocketbot in Gartner

First Latin American RPA platform to appear in the magic quadrant of Gartner. We were granted 4.5 stars and became part of the "Strong Performer" category

Rocketbot in G2

In the last report, G2 positioned us in the High Performer quadrant, in the top 5 of multiple categories.

Speed and accuracy

Tasks are always performed quickly and in the same way

Happier employees

Employees focus on value-added tasks that are more human and not robotic

Higher compliance

Full audit capabilities

Fewer barriers to onboarding

Perform more tasks with the same personnel

Higher productivity

Design bots with less coding and no need for programming environments

Main sectors and some examples

Logistics and Transportation

Manifest loading, import management, withdrawal requests, form review and more.

Financial services

Payroll subsidies, legal withholdings, reconciliation of cash closings and more.

Healthcare

Smart notification, call monitoring, weekly statement, insurance verification and more.

Insurance industry

Premium payment confirmation, debt recovery, policy issuance and more.

E-commerce

Quality claims, efficiency reporting, bulk stock upload, Vtex management and more.
